

Appendix

1 Qualitative results of models on the class-level continual multi-organ segmentation task

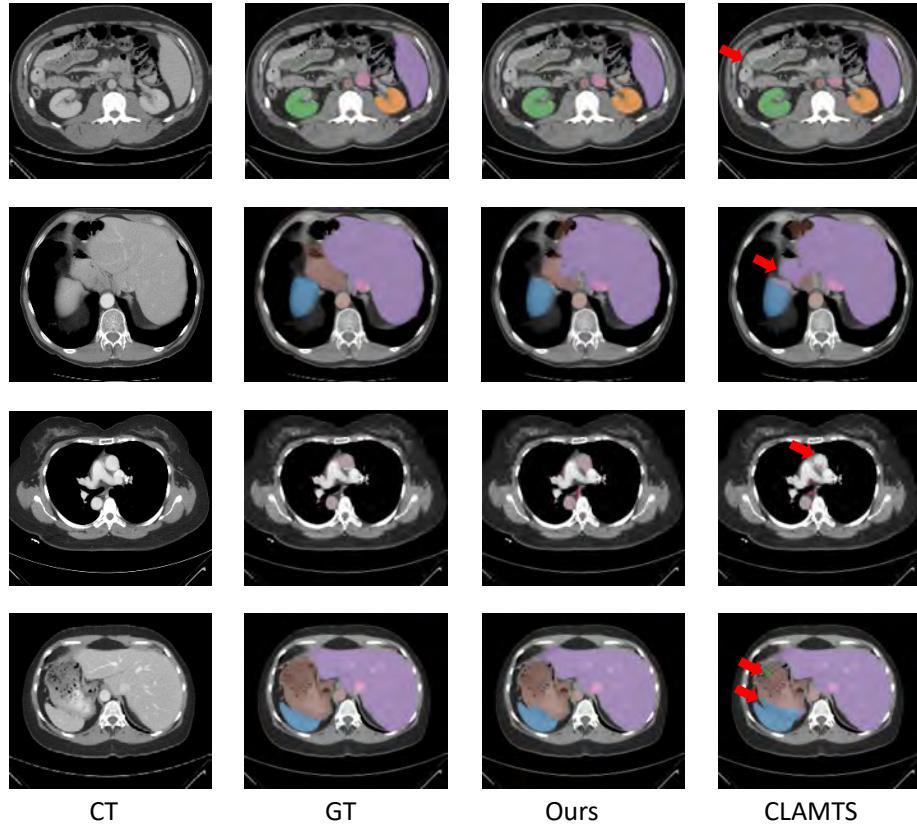

Fig. 1. The visualization comparison between our model and CLAMTS in continual learning step 2 on the BTCV dataset.

2 Quantitative results of models on the task-level continual medical image segmentation task

Table 1. Benchmark task-level continual learning methods. ∇ , Δ and \square represents ACDC, ISIC and COVID-19 CT dataset respectively. Red indicates the performance of the data trained in the final stage.

| Model | #Param | low-rank | MoE | ACDC | ∇ | ISIC | Δ | COVID-19 | CT | \square |
|---|--------|--------------|--------------|---------------|---------------|--------|---------------|----------|----|-----------|
| SOTAs | - | - | - | 0.9146 | 0.8903 | 0.6820 | | | | |
| $\nabla \rightarrow \Delta$ | 88.1M | \times | \times | 0.5019 | 0.9069 | - | | | | |
